www.tikiwiki.org

Tiki is a web-based, multilingual, wiki-based, content management system (CMS) with a tightly integrated set of comprehensive groupware features. Tiki is free and open source software, created by a large, international development team.

Tiki includes hundreds of deeply integrated features. Unlike other solutions, Tiki "does it all." You do not need to find other modules or add-ons to fill in the missing pieces. With its "all-in-one" design, Tiki can easily create *all* types of collaborative applications: websites, portals, knowledge bases, intranets, extranets, and more. With an enormous feature set, and a web-based, administration interface, Tiki has both the features you require and the ease-of-configuration that you desire. Because of its rich feature set and active developer community, Tiki will meet all of your requirements, now and in the future.

Features

  gateways

Preconfigured Solutions

To get started quickly, Tiki includes predefined solutions called *profiles*. These profiles are complete setups, fully configured, ready for immediate use. Because these Tiki profiles are community-based, you can even create your own profiles, based on your customized configurations, to share. Examples of Tiki profiles feature include:

- Corporate wiki / Intranet / Extranet
- Corporate website
- Knowledge base / Bug tracker
- Project management
- Community portal
- Workflow and specialized web applications
- Application forms
- Multilingual collaborative glossary

New profiles are continually added in an open, collaborative way. To learn more about Tiki profiles, visit http://profiles.tikiwiki.org.

Technical Specifications

Tiki uses standard, readily available web hosting technology. Tiki uses these industry standard technologies:

- PHP
- ADOdb
- MySQL
- Zend Framework
- jQuery
- Smarty

Tiki Timeline

Since its initial release in 2002, Tiki has has seen substantial growth with more than 800,000 downloads and countless more installations through one-click hosts.
