PluginSF

New ! SF plugin !

- must edit the lib/wiki-plugins/wikiplugins-sf.php and fill out default values for groupid and atid in the tags arrays

  - define('SF_CACHE',48); # in hours ... function wikiplugin_sf($data, $params) { $tags['bugs'] = array('64258','506846'); $tags['rfe'] = array('64258','506849'); $tags['patches'] = array('64258','506848'); $tags['support'] = array('64258','506847'); $tags['jgbug'] = array('43118','435210'); $tags['jgsupport'] = array('43118','435211'); $tags['jgrfe'] = array('43118','435213'); ...

- Bugs are default tracker (first defined tag):
  - {SF(aid=>747033)}{SF}
    {SF(aid=>747033)}{SF}

- use a tag :
  - {SF(tag=>rfe,aid=>640834)}{SF}
    {SF(tag=>rfe,aid=>640834)}{SF}

- can specify another project ! bug in jgraphpad ? :
  - bug in jgraphpad : {SF(groupid=>43118,atid=>435210,aid=>815711)}{SF}
    bug in jgraphpad : {SF(groupid=>43118,atid=>435210,aid=>815711)}{SF}

- labels are cached in temp/sftracker.* for 48h as text files, easy to use elsewhere

- php-curl is used to parse the page on sourceforge

[mose](#)

Do you use that feature for your SourceForge Project ? Add your url down here !
- http://tikiwiki.org

Bugs

Tracker titles are parsed as WikiSyntax.
Title doesn't appear first edit/preview.
Not parsed on my UserPage *Chealer9*

[userpageterris](#): Anchor tag text is always blank for me when I add SF plugin to tw.o e.g., WikiDev page. I suspect caching. When the item isn't in the cache this plugin doesn't seem to update the cache. New items should cause the cache to be updated immediately. Perhaps I'm experiencing a permissions problem that causes the item to never be cached.

- [UserPageChealer9](#): Not really, PluginSF is broken (at least, on tw.o) since monthes 🙂
- **Can someone confirm [the comment](#) by Chealer ?**
