Topics
1st hour quick news

- Shall we remove the Post-it note on tiki.org asking users if they have already upgraded their sites?
- New Profiles in development for Tiki15+: (already in "beta")
  1. https://profiles.tiki.org/Execute+on+List
     To ease the learning of a few features not covered enough in previous profiles:
     - PluginListExecute and the format changes to display outputs just like they were the same
     - Mathematical Calculation Tracker Field and Advanced rating
     - inline edition of some fields in tracker items
     - k-Desorfer feature to allow selecting in realtime which columns to display or choose trackers to hide some
  2. https://profiles.tiki.org/Work_Custom_Pricing
     Demonstrate some enhancements to item link and trackers in general to allow while adding an item to tracker 1 select many linked items from a second tracker 2 and a mathematical calculation field perform a formula on some of the fields from the selected items selected from the table insert on the fly.
     In addition, implements another way to extract prices from a price guide (in tracker 3) but allow you to override them on the item of tracker 1, for invoicing purposes with different end prices depending on type of customer, other agreements, etc.
  3. GeoCMS_Maps
     https://profiles.tiki.org/GeoCMS_Maps
     - Easily demonstrate geo location capabilities of Tiki in several features of the CMS: Wiki pages, Tracker items, Blog posts, and articles.
     - Show maps per feature, or everything in an integrated map.
     - Ideally, some filtering capabilities will be included, with plugin Custom Search and eventually other tricks.
  4. Bug_Tracker_15
     https://profiles.tiki.org/Bug_Tracker_15
     - Easily demonstrate some of the new features added in the last versions compared to the old bug_tracker profile (tracker inline edition, sortable tables, change field type, clone items, etc.) ...
     - ... as well as the new PluginPivotTable coming along in trunk so far. Ideally to be backported to 16.x and 15.x once 16.0 is out.
Second hour, longer topics

1.1.1. profiles.t.o upgrade plan to ease filtering and sorting of profiles?

https://profiles.tiki.org upgrade plan to ease filtering and sorting of profiles?

- We would need some way to create a sortable and filterable list of Profiles from the Profiles Wizard in tiki instances (ideally), and at profiles.t.o site, at least. There are way many profiles ready for learning Profiles Wizard and profiles.t.o upgrade plan to ease filtering and sorting of profiles?
- https://profiles.tiki.org uses Tiki 9.x, which doesn't have Tablesorter. We plan Tiki 12.x at least? Any other issues and hiccups in filtering?
- profiles.t.o is on-ovh server with low memory and disk space limits, and now disk space needs an increase to prevent logging web display issues. Are we logging too frequently (maybe)?
- nextprofiles.tiki.org is currently also in the same ovh server
- That would allow to make a better filtering and sorting of profiles which are ready for each version, etc. (we could post an updated list and document on doc.tiki.org or elsewhere, and reuse with iframe/something.)
- Other features are an underestimated treasure and one of these features making Tiki outstanding are the Profiles tool in the Profiles Wizard. community site deserves a similar overhaul as the Themes website. potentially look responsive and nice, same as themes.tiki.org. at least marketing-wise. (thx for bringing 'Profiles' on to the agenda!)

1.1.2. URGENT: Changing spam reduction strategy in tiki.org

See the description of the current system in place: https://tiki.org/How+to+approve+registrations+on+tiki.org

1.1.2.1. registration in t.o with "Registration page key" but custom links without it

We seemed to have setup the randomstring keyword needed ("Registration page key") in the url for the registration screen to show up in https://tiki.org, but this was blocking users from registering since there was a hand made link to "Register" in the tiki homepage that didn't have that keyword string manually setup in that hand-made link.

Conclusion: users that clicked at the link from the Homepage couldn't register. And the link to "register" from the login module didn't work either for me the first time I tried but only after I disabled the feature "Registration page key" and re-enabled it again (caching issue? was that recently setup in tiki.org???)

Anybody aware of other places were we did setup custom links to "Register" or tiki-
1.1.2.2. new user admin validation in tiki.org (intertiki) by a single person

Regardless of the many thanks we need to give to the person that has been taking care of validating new user requests in tiki.org, we cannot rely in this custom hand-made single-man procedure, since it means a bottleneck and too much pressure and responsibility on a single person for such an important entry point of new users, reviewers and developers to the Tiki community.

I did a quick review, and there were plenty of legitimate registration requests to tiki.org (like the ones reminded on irc and through personal emails days ago to some admins), and dozens of others in the last weeks. Even found some legitimate requests from several months ago (4 months ago, 8 months ago, ...) among dozens of spammer registration attempts. So the man-made work was working pretty well, but indeed not well enough. And it’s not a single-man responsibility. Therefore, I propose to change this situation to one that better matches the needs of allowing users to register automatically when proven that they spam. I believe that's possible.

For instance, validation of new user requests can’t be done in bulk in the user admin UI (not even easily reviewing their user tracker records with a single click), but removing and banning IPs can be done indeed in bulk from several places (user admin, action log UI, etc).

Follow-Up

Chat log

Jean-Marc Libs (Jyhem): the best I have
lucia d' being (luci): wow, another one! :D
Gary Cunningham-Lee (chibaguy): It's getting festive.
lucia d' being (luci): I could steal my son's stormtrooper (or whatever trooper) helmet but sadly it is too small for me ;)
Gary Cunningham-Lee (chibaguy): :

lucia d' being (luci): hi Jun
Jun Moriya: Hi
lucia d' being (luci): ItemLink
Jonny Bradley (jonnybradley): ;)
Gary Cunningham-Lee (chibaguy): 8^)
Jean-Marc Libs (Jyhem): luci: clevr :)
lucia d' being (luci): https://dev.tiki.org/tiki-view_tracker_item.php?itemId=6134&threadId=5003&cookietab=2#fragment-5
Jean-Marc Libs (Jyhem): is that a field type?
Jean-Marc Libs (Jyhem): (the pivot)
luciash d' being (luci): you said preferences but meant maybe params?
luciash d' being (luci): so it will save the params
luciash d' being (luci): gotcha
luciash d' being (luci): it works just with numbers?
luciash d' being (luci): :D
luciash d' being (luci): yup yup
luciash d' being (luci): all clear now :)
luciash d' being (luci): looks very useful
luciash d' being (luci): thanks xavi!
Xavi (as xavidp - admin) (xavidp): you are welcome! :-)
Xavi (as xavidp - admin) (xavidp): thanks Marc for supoprtng the development :-)
luciash d' being (luci): we are all interested! :) 
Xavi (as xavidp - admin) (xavidp): and Amna as the developer that implemented it so far in Tiki
luciash d' being (luci): yes yes!
Gary Cunningham-Lee (chibaguy): Thanks for the new profiles, xavi, and explanations.
luciash d' being (luci): :)
Jean-Marc Libs (Jyhem): https://tiki.org/TikiFestFosdem2017
Jean-Marc Libs (Jyhem): https://tiki.org/TikiFestFosdem2016
luciash d' being (luci): thanks!
luciash d' being (luci): BTW, related bug report to applying profiles:
https://dev.tiki.org/item6141
luciash d' being (luci): we need to test applying profiles with nextprofiles.tiki.org before upgrading
luciash d' being (luci): it could be just matter of adding the nextprofiles.tiki.org to the repositories list in your profiles control panel in Tiki but I am not sure it will work since there is the next:next http authentication
Jean-Marc Libs (Jyhem): nextprofiles.tiki.org canonical name = ovh.tiki.org.
Jean-Marc Libs (Jyhem): wget ' https://example.com' --http-user=xxx --http-password=xxx
luciash d' being (luci): I was actually wondering if all the anti-spam features we have on there are working actually because still so many spammers register without answering the questions, etc... :
Jean-Marc Libs (Jyhem): That's due to intertiki? 
luciash d' being (luci): registkey=%regkey%
Gary Cunningham-Lee (chibaguy): I get this url in two different browsers when clicking the login module's registration link: https://tiki.org/tiki-register.php?key=randomstring . Is that how it should work (and not a real random string)?
Gary Cunningham-Lee (chibaguy): ok
Gary Cunningham-Lee (chibaguy): kitsune
Jun Moriya: I cant speak well; so I put here
Jun Moriya: ie. english problem. anyway
Jean-Marc Libs (Jyhem): The classic One time Password system requires to distribute physcal password generators to people. That won't work
