http://live.tiki.org

Topics
1st hour quick news
Please aim for 15mn for each topic else it should be moved to the second hour or another meeting

1. TikiFest2017-Brussels-Fosdem summary
2. Release process, what’s next (Tiki17)
   1. Schedule, task force
   2. Quick review and lightning brainstorm to organize the duplicate/removal/migration discussion/debate and process about
      https://dev.tiki.org/Tiki17#Experimental_Unavailable_Duplicate_check (not talking about the features or the options, just the decisional process)
3. Quick format text commit guideline (dev)
   Intention here not to solve the example given to illustrate below but to decide how we handle this. This is for the strings in the code, not the content entered by a user. (Typography new Tiki feature ?)
   a. Wiki page in dev, short guideline (couldn’t find it) with samples as reference.

Examples
1. Tool tip punctuation
   Same page, same feature, 3 ways ❌
   ❌
   ❌
   ❌
2. Choose the right special characters
   Do we use &amp; or & - R30; or &hellip; or ...
   Ref: http://www.w3schools.com/charsets/ref_utf_punctuation.asp,
   3. Punctuation should be inside strings (translation discussion 2016)
   4. Add more use case
4. Semi-auto merge period guidelines quick review
   (include "The community will handle merges from stable to dev, with help from a merging script during Semi-automatic merging period" at Where to commit)

Some questions and post in the dev list raised about this. Do we need to clarify anything more there ?
   ◦ I wonder if we shouldn’t be more specific about "who (must) do the merge". Are there period were we rely on "the community" and other period were each commit should include a merge ?
   ◦ There are several (a lot ?) pages related to merge, merging and they need update and maintenance: https://dev.tiki.org/merge, https://dev.tiki.org/Merge+a+commit+from+trunk,
Second hour, longer topics

1. Updating critical information and checking sysadmin list and task: [https://tiki.org/Domains](https://tiki.org/Domains)
   Including what we do with domains that no one want to care for.

2. How (sort order, sections, splitting) should prefs and options should be presented.
   User experience tiki-admin.php?page=features or tiki-admin.php?page=wiki has a bad impression on the way Tiki has been build.

   In general, there is no common logic or consideration for the new comers.
   - It doesn’t go from easy to hard
   - Doesn’t go from standard to advanced
   - Doesn’t go from A to Z

   ... Nothing
   - A to Z only is not a solution
   - Multilingual (things changing place)
   - (I wished several time we can have a default admin language pref)

   Sample:
   tiki-admin.php?page=wiki
   Second pref is: "Wiki URL Scheme" (I’msure that this is very important, but I have doubt it one of the first thing you check when creating your Tiki)
   Second section is Plugin (hu ?)
   Finally Page Display is third and inside a common setting like "Hide title per wiki page" is last
   Editing come is the sixth section and "Wiki content templates" is the first pref in the section.

3. Deprecated, removal, transition, the discussion (if time left)
   Background: [https://tiki.org/Roundtable+Meeting+2017+02](https://tiki.org/Roundtable+Meeting+2017+02)
   1. Could we have a transition process for deprecated?

   Decision about:
   1. Deprecate Versions Plugin in favor of PluginTabs or not? => Can’t we merge
   2. IE Image Fix
   3. Wiki Lingo feature as it look like being abandoned project => To be removed
   4. FAQs => TBD
   5. Image Gallery => To be removed (auto migration script)
   6. HTML pages => Endangered
   7. HTML Feed => Endangered
   8. FutureLink-Protocol => TBD
   9. Reports => TBD
   10. Group Alert vs Group Watches (Do we need both of (almost) the same?) => TBD (merge)
Recording
