Integrating BigBlueButton in other systems

Tiki (since version 5) offers a built-in integration with BigBlueButton. You can try it out now at: http://live.tiki.org/

If you are interested in integrating BBB in other systems, please do show up. At this event, an important topic is to improve the interaction of BigBlueButton with Tiki and any other application (Drupal, Joomla!, etc.). Also, if your project is in PHP, you can re-use Tiki code (licensed LGPL so include-able in other apps)
