UserPageDavidCramer

Problems I'm having

Tikiwiki 1.8, polaris on Red Hat Linux 9, Apache 2.0, php php-4.2.2-17.2, mysql-3.23.58-1.9

- Spellcheck (get an error; I've posted about it)... 
- POP accounts: One works but one (from domain hosted by pair.com) gives error: "Error: 2 POP3 server greeting was not found Error: Error." I see another user has reported this in the shoutbox.

Things that are probably possible, but I haven't figured out how to do yet

- Create a list of pages that are in a certain category.
- List watchers of a page

Possible feature requests or suggestions

- Add a google search with site: built in as an alternative to search_new...
- Add a notion of home page with a link in the header to it (like in moinmoin).
- Better search scoping. E.g. the ability to limit a search to a structure, category, forum, etc.
