A Bit About Moi

Hi my name is Stephen Lee and I am 30 from Leeds in England, UK.
I have used TikiWiki to develop an Intranet for an organisation called NYCRIS who gather statistics on cancer throughout the Northern and Yorkshire areas of England.
I am now in my final year of studying Information and Communication Management BA(Hons) at University.

Currently I am doing a research project that aims to explore the role of content management systems in the storage and retrieval of corporate information so if anyone has any literature in this area I would be eternally grateful for your help.

My interest in Web Development started four years ago when I started using HTML on a teaching course. Since then I knew that designing and developing Web Sites was what I wanted to specialise in.
I am now very interested in database driven web sites and how they work.
I have attended a PHP course and self taught myself a lot of SQL especially in using MySQL.

Contributions

I have designed my own plugins and modules for use with TikiWiki and also am trying to make the general layout more consistent by changing a lot of templates.
I have also created several plugins, one of which I have attached to this page for extracting information on users from an ldap server especially useful for Intranets.
Also there is a modified application menu tpl and user menu tpl (if using the menu option to create menus.) both will need the modified js file(1.8.3ver) with ❌ and ❌ signs instead of the [+] and [-] either side.
See also NHSblue and LDAP projects at http://mods.tiki.org/.
