ChompBot

Introduction

Chompbot, a specific kind of chumpbot, saves URLs mentioned on an IRC channel to a specific repository at del.icio.us. To save the URL, you must tell the bot about the URL.

Our chompbot goes by the name of *tchmp* and when you tell it to save URLs, they go into chomp_tikiwiki. That is the del.icio.us repository for any URL that you capture from a chat on #tikiwiki.

You may encounter other bots besides *tchmp* when ConnectingToIRC, e.g., TikiBot, Soupy, tikibob and H0neyBot

Usage

<botname> <url> #<title>

Example

tchmp http://tiki.org/ #Powerful CMS / Groupware

Comments

- chompbot automatically adds **posted by <nick>** in the extended comments
- l.m.orchard developed chompbot, a Perl-based IRC bot available at decafbad
- All saved URLs also appear on the main page at del.icio.us when posted to chomp_tikiwiki.
- chompbot provides an alternative to retrieval of URLs from a review of our IRC Logs
