

ContentPacksDev

Relevant content here should be merged into <http://profiles.tiki.org>

This feature is not yet implemented. Just a quick sketch:
Content packs are, well, packages of Tiki content.

Content packs can be provided at Tiki installation

- During the webbased installation, the admin can choose what content packs she wants to install
- There is an additional link "get more content packs"
- That way, e.g., wiki pages for the documentation of Tiki could be provided from the start, selected per default, but deselectable in the setup process

Content packs are dumpable

- admin can select (checkboxes) which pages to export in a content pack. Like a wiki dump, but with selected pages.
- Categories are helpful. (dump all pages in category documentation)

Content packs mix well with TikiProfilesDev

- for example, a Tiki Profile could be provided along with a content pack describing its use.
- see TikiProfilesDev for a description
