

Continuous Integration Team

The [Continuous Integration Team](#) focuses on all automation aspects to catch bugs early and to keep the quality high (unit tests, etc.)

This covers automated testing. For manual testing, please see [Wishlist Triage Team](#).

See also: [Testing](#)

Release responsibilities

If (when!) the Continuous Integration Team will have everything set up, there should be nothing special to do with respect to the release.

Ongoing

- Maintain [quality.tiki.org](#) -> [Continuous Testing Server](#)
- [Make sure tests are always green](#) (report to author about a commit that breaks the build)
- [Selenium Testing](#)

Project

- Cleanup all testing related pages on *.tiki.org
 - Perhaps make a perspective on dev.tiki.org ?
- Set up a testing infrastructure (beyond our current Unit tests)
- Investigate http://sourceforge.net/p/tikiwiki/code/HEAD/tree/trunk/tiki_tests/ and check who uses and how
- [Automated checks on the Tiki code base](#)
- Set up a testing suite on [Pre-Dogfood Servers](#)
