

```
.tiki-audience-heading h2 { font-size: 3rem; }
```

```
.section-subtitle { font-size: 180%; margin-bottom: 1em; } .tiki-create-heading { background-image:  
url(display2330); } .audience-background { z-index: -1; opacity: 0.4; position: absolute; top: 1rem; right:  
1rem; text-align: right; }
```

## Create Tiki

### Developing and contributing to the project

#### Developers Information

We make software "the wiki way" — no rigid hierarchy, and easy onboarding and commit access for new developers. While Tiki is a mature project, started in 2002, it continues to evolve with new features being added steadily, such as Vue.js and Rubix ML. The project file repository began on SourceForge.net and has evolved from CVS to Subversion, and then to Git, hosted at GitLab. We invite coders of all levels and interests to take a look at Tiki and join us if the project catches your interest. Please see <https://dev.tiki.org/TikiDevNewbie> for more information.
