

## Developers Team Release

1. Make Tiki good enough (fix bugs, etc.) so that it can be released by the [Packaging Team](#)
2. Provide [Documentation Team](#) with basic information about features.
3. Update all Developer documentation to take into account new version number and features. Ex.: [Download](#), [Commit](#), [Hello World](#), etc....
4. Review all [Experimental branches](#) and delete if appropriate (could be done at any time, but a 6-month reminder is good).
