## Developers Team Release

- 1. Make Tiki good enough (fix bugs, etc.) so that it can be released by the Packaging Team
- 2. Provide Documentation Team with basic information about features.
- 3. Update all Developer documentation to take into account new version number and features. Ex.: Download, Commit, Hello World, etc....
- 4. Review all Experimental branches and delete if appropriate (could be done at any time, but a 6-month reminder is good).
