

# DynamicContentSystemGloss

The Dynamic Content System (DCS) is a very simple concept. You can edit blocks of HTML code or text from a admin screen and you can display a block in any Tiki template or user module. Updating the block content will update the template. You can also program block content by date--storing several blocks to be displayed in future dates. This simple system adds a lot of flexibility to Tiki. You can display anything you like anywhere in the screen and you can set up portions that can be changed or that change automatically along time.
