

## FriendshipNetwork

Here is a brief idea about the ))FriendsNetwork((

### General Description

---

The Friendship Network is a system where we may ask our fellow TW users to be part of our direct contacts. Helping to create a connected community.

### Key Function and sub-features

---

Allows members to request communication. If the request is answered then you will be added to the persons' Friends list.

- A new menu "Community" is created, with the correct perms this allows you to see the member list.
- A sub menu "Friendship Network" takes you to your friend list.
- Posts by your friends will have a friend icon
- At the users profile there is a "This user is your friend" note.
- What else does it do?

### Related Links

---

[Friendster-like features, \(A forum post\)](#)  
[CommunityConnections](#)

### Typical Uses

---

This could be used in a large community to help get people connected.

Used in conjunction with the trackers this could be a powerful way for people to connect.

- Arranging events
- Finding friends

When invited by someone you receive a message at your MyTiki area

Example message,

From: Webkeeper

To: jamesoftopiya

Cc:

Subject:

You're invited to join my network of friends!

Date:

Mon 09 of Aug, 2004

Go to your friendship network to accept or refuse this request

### Case Studies

---

This feature is now here at tiki.org

### Bugs

---

Of course as could be expected the IE experience gave me some problems. This error was when I tried to connect to the "Community" link in the menu. This did work in Mozilla saying permissions denied, as I had not set the new perms up yet.

IE-5- ERROR

The XML page cannot be displayed

Cannot view XML input using XSL style sheet. Please correct the error and then click the Refresh button, or try again later.

-----  
Only one top level element is allowed in an XML document. Error processing resource

'http://xxxxx.net/tiki/tiki-list\_users.php'. Line 2, Position 2

**Notice**: Undefined variable: tiki\_p\_list\_users in **/home/xxxxx/public\_html/tikiwikiwise/tiki-list\_users.php** on line **13**

-

## **Work Around**

For months I had the same problem mention above, "The XML page cannot be displayed"....

I found a workaround here:

[http://tiki.org/tiki-view\\_forum\\_thread.php?forumId=6&comments\\_parentId=5878](http://tiki.org/tiki-view_forum_thread.php?forumId=6&comments_parentId=5878)

It said "*Go to the General preferences and settings page and uncheck Use gzipped output you will correct the ..... problem.*" I did this and I no longer have that problem.
