

## Get Tiki

Get Tiki the best way to meet your needs. You can download a compressed archive of a recent release version to your computer, or use a third-party method to get it. If you are ready to create a public Tiki website, one easy way is to choose one of the Tiki-friendly hosting companies and use their one-click installer. If you're a developer, please go to GitLab and clone the Tiki files. If there are any questions, feel free to [contact us](#) or consult our [help resources](#).

### Tiki 26.x - The Latest Stable Release

Get the most-recent cutting-edge version, Tiki 26, which continues the rapid pace of code commits for new features and technical upgrades. For a complete list of new features, improvements, and bug fixes see the [Tiki 26.x documentation page](#).

[Download Tiki 26.x](#)

Supported until the release of Tiki 27.1

**RECOMMENDED**

### Tiki 24.x - The Latest Long-Term Support (LTS) Version

Get the latest LTS versions by downloading now. For a complete list of new features, improvements, and bug fixes see the [Tiki 24.x documentation page](#). Want to help? Become a developer!

[Download Tiki 24.x](#)

Supported until February 2027

**RECOMMENDED**

## Tiki Manager

Tiki Manager permits you to install and manage one or more instances of Tiki. You can install, upgrade, back up, clone, check file integrity and do various other things on the same server or a remote server. Most actions can be run unattended on a cron job. Tiki Manager can be used via the command line or a web interface. Please visit [doc.tiki.org/Manager](http://doc.tiki.org/Manager) for more information.

## One-Click Script Managers and Remote Installers

Tiki is provided as a one-click installation by most script managers (for example, Softaculous) and remote installers (such as SimpleScripts) at web hosting companies. These auto-installers are offered by nearly all web hosts and control panel (cPanel) applications and make it easy to install and upgrade your Tiki. See [1-Click Installers](#) for more information, also check [recommended](#) and [friendly](#) hosting solutions, in addition to the hosting companies listed below.

The following web hosts have reasonable prices, offer e-mail accounts and domain names and contribute a share of their hosting proceeds to the Tiki Software Community Association. So by subscribing while clicking through a link below, you are getting a good deal and indirectly helping Tiki financially. These hosts also coordinate with the Tiki community to help improve

performance and security.

## a2hosting

 [Start your hosting with a2hosting](#)

When you want Tiki Wiki Hosting, you want the high performance host featuring the SwiftServer platform. That's us! At A2 Hosting, you can host your wiki on our blazing fast Turbo Servers featuring up to 20X faster page loads compared to competing Tiki Wiki Hosting provider

s. You're going to love them!

---

## Host monster

[Start your hosting with Hostmonster](#)

Hostmonster is a US-based company specializing in shared hosting. See their [features](#) page for details. By [subscribing now](#) and taking advantage of the 1-click installer, you can have your Tiki-powered site up and running in minutes.

## Additional methods

### Development code daily builds

You can also download a pre-release tarball (ZIP file) that is continually built every six hours. See the `.timestamp` file to determine the time and date of the tarball. Please visit [Daily Builds](#).

### Download with wget

The URLs at SourceForge usually end with `/download`, which causes `wget` to use **download** as filename. For a more convenient download, use syntax `wget --trust-server-names` to save with the proper filename. More about this topic at [sourceforge.net - Downloading files via the command line](#).

### Clone the project at GitLab

To clone the Tiki development files, go to [GitLab](#).

### WikiSuite

Tiki is also part of [WikiSuite](#). Learn more at <https://wikisuite.org>.
