InfoTikiWikiOrgDev

Intro

This page is dedicated to the desing of the homepage of Tiki.The pages on info.tiki.org are those first impression pages for folks arriving to Tiki. In order to keep them organized they can not be edited directly on the info.tikiwiki page, they are discussed and desinged here first, then go public

Proposed info.tiki.org layout - add your ideas here!

- Unify text with promo sheet & use famfamfam icons?
- The opening page of Tiki should give a quick and easy overview on what Tiki is about with as few clicks as possible

gezza: I think we should avoid using links for the *Features*, *Join!*, etc subpages and try to make a tabbed layout where you can navigate without page reload. Currently there is no such feature in Tiki but maybe it should go on the roadmap to have plugin for this. It could be called "tab plugin" and should be similar to the existing "versions" plugin (maybe this one could be enhanced to use ajax and a few more parameters).

previous welcome text

[+]
Current issues:

- what to include in the article listing

Tiki News listing syntax

```
{ARTICLES(max=>5,topicId=>!5)}{ARTICLES}
```

- tab switching reloads the page
- can not center H1, the syntax does not work

```
::!TEXT:: {CENTER()}!TEXT{CENTER}
```

Example:

!TEXT
!TEXT

    - Need to use a DIV:
      !{DIV(align="center")}TEXT{DIV}

TEXT

- ~~anonymus in users can not navigate, when trying to switch tab the page just reloads but the tab is not switched. When logged in it works fine. This is caused by **cache!** If it need a refresh from cache, navigation will not work. After you refresh (with the green arrow icon on the top), navigation will work for anonymus~~
- the first H1 of a tab is not processed correctly. workaround is to start a raw, put one space than press enter and put the H1 in the 2nd row, than it is fine in preview mode but not fine after save
- having a wikilink in a H1 disrespects H1 style

Tabbed design using VERSIONS plugin

Why use Tiki? Check our Top 10 Reasons!

1. Tiki is free, opensource software, licensed as LGPL. The project's philosphy is detailed in our social contract
2. Tiki has all the features you want wiki, news articles, blogs, polls, forums, trackers (database), image and file galleries, and much more in a tightly bundled system.
3. Tiki has fine-grained user and group permissions. This allows you to easily give users access to exactly what they need.
4. Because Tiki uses a powerful templating engine (Smarty (external link)) you can easily customize a Tiki site to make it your own. Tiki's Site Identity and Theme Control features make it easy.
5. Tiki use of database abstraction (ADOdb (external link)) enables compatibility with many environments, including MySQL.
6. The Tiki project partners with Open Source Software actors (external link). We leverage existing technologies and partner with field leaders whenever possible.
7. As a leading CMS application, Tiki has been nominated for, and received, several awards by the software community.
8. Tiki's active community includes nearly 300 developers and contributors to the code base and more than 12,000 registered users.
9. There is continuing, active development. On average, developers update the code (with new features and fixes) every two hours. Please see: Roadmap.
10. The official Tiki documentation, maintained by the Tiki community) contains more than 1,500 wiki pages and includes a fully illustrated PDF.

Tabbed design using TABS plugin

Welcome to Tiki!

Tiki is a web-based, multilingual, wiki and content management system (CMS) tightly integrated with a comprehensive set of groupware features. It is a free and open source software

created by a large, international development team.

Tiki includes hundreds of well integrated features. In most situations, Tiki “does it all”, you do not need to find other software to fill in a missing piece.
Because of this, Tiki helps you to easily create all types of collaborative applications:

- websites
- portals
- knowledge bases
- intranets
- extranets

Tiki’s web-based, graphical interface makes it easy to configure the features you need. Tiki’s enormous set of features allows you to have the confidence that it will adapt well to all your requirements, now and in the future.

Get Tiki!

Current Stable Release: 3.1

{SPLIT}

Whatever you are looking for, chances are Tiki has it. Your search for the most feature-complete CMS is over.

Read the Top 10 Reasons to use Tiki and get started with Tiki today!

TikiWiki is Free and Open Source software (LGPL 2.1 (external link)). You do not have to pay anything to anyone to use TikiWiki. However, you may choose to get hired help for setup, hosting, training, etc.

These consultants are active contributors to the TikiWiki community. By hiring them, you are permitting them to spend more time to contribute to TikiWiki.

When you do hire people (they don't have to be on this list!), make sure to insist the fixes and enhancements are re-contributed back. This is good for you so you don't end up with a forked-version which will be difficult/expensive to maintain. It's good for the whole community as it accelerates Tiki's progress.

WikiSuite is 13 years old!

Marc Laporte - 11 Mar 2024 18:45 GMT-0000

So I launched this 13 years ago! I am very pleased with the current state and progress. It will just get better and better as the community grows

Here were the initial vision/goals/plans:

A slideshow: https://wikisuite.org/Initial-Slideshow
An interview (in French): https://wikisuite.org/Initial-Interview

It was originally called "Tiki Suite" as a suite of tools around Tiki Wiki CMS Groupware, and also because suite also means next in French. So the next step for Tiki

Happy 21st Anniversary, Tiki!

John Santos - 08 Oct 2023 23:50 GMT-0000

> Today, we raise a virtual toast to celebrate the remarkable journey of Tiki Wiki CMS Groupware as it turns 21. What began as a modest wiki with extras in 2002 has blossomed into a versatile web application, shaping the landscape of intranets, websites, portals, knowledge bases, and more. Tiki has not just stood the test of time; it has evolved into a tech powerhouse.

Tiki 26 Release Continues Rapid Feature Development

Gary Cunningham-Lee - 30 Jul 2023 15:29 GMT-0000

Following the project's biggest-ever release, Tiki 25, seven months ago, the pace of code commits has only accelerated and now Tiki 26 is available with significant new features, further development of recent feature additions, and the usual bug fixes and enhancements.

New features include color mode support, so Tiki sites are responsive to the user's browser color scheme preference and can be toggled between light, dark, and auto (with more configurability options coming soon). A new emoji picker enables picking and inserting emojis (finally). Tiki 26 includes a new theme, BookStacked, an implementation of the BookStack web app appearance. Interact.js and a URL fragment guesser have also been added.

Enhancements have been made to Cypht webmail, Calendars, the debugger console, InterTiki (for inter-Tiki-website interaction), Manticore search, Tiki's Markdown implementation, several modules, Tablesorter, Tiki Crawl for web scraping and web crawling, and the tracker feature. See https://doc.tiki.org/Tiki26 for more details.

Tiki 26 has been updated to benefit from the higher performance and new features of PHP 8.1. See Requirements for more information about Tiki and PHP versions.

This release is available for download or installation via git or Tiki Manager.

Many thanks to all who contributed to developing and testing Tiki 26.

Tiki is free Open Source software that is made possible by individual volunteer efforts and donated funds and services. If you would like to help the project continue, please visit the page Contribute to Tiki. Any donation would be greatly appreciated.

If there are any questions about this new release, please ask in the Tiki community chat room or use other contact options. To look into paid assistance, please visit the consultants page. For enterprise-level support, please contact EvoluData.
