

# InstallTiki, nl

## Installatievereisten

Kijk eerst of je systeem aan de volgende eisen voldoet:

doc:((doc:Login Config|Installatievereisten (in het engels) )).

Understand that getting Tiki to run without checking those doesn't mean that everything will always work.

You can always opt to choose a TikiFriendlyHosts. Some even offer to Install Tiki for you!

## Installation procedure

Server type	Environment	Help Page	Comments
<b>Remote</b>			
	If you only have FTP access	InstallWithOnlyFtpAccess <a href="#">Video example</a>	
	Sourceforge hosted	SourceForgeTikiInstall

<b>PHP5 Guidelines</b>			
	Gentoo + PHP5	<a href="#">TikiWikiPHP5</a>	Gentoo and possibly others with modification.

## Moving

Move Tiki to another server `MoveTikiToAnotherServer`

Worked for me. Feel free to add!

We are working on other formats like Debian, SuSE, etc. Feel free to help with these.

## Database

Tiki currently runs with MySQL 4.0.\* or earlier and PostgreSQL. Most of the documentation assumes you're using MySQL. Postgres users however have a [page](#) for some information.

Tikiwiki 1.9 -sirius- is moving towards support for 4.1.X with a upgrade in the ADODB layer, however 1.8.x does not support MySQL 4.1.x.

## For more information on the Tiki installation process

- `InstallTikiHelp` is there for you if anything does not work right...
- `MigrateToTiki` exists with some useful conversion scripts
