

InstallTiki, nl

Installatievereisten

Kijk eerst of je systeem aan de volgende eisen voldoet:

doc:((doc:Login Config|Installatievereisten (in het engels))).

Understand that getting Tiki to run without checking those doesn't mean that everything will always work.

You can always opt to choose a TikiFriendlyHosts. Some even offer to Install Tiki for you!

Installation procedure

Server type	Environment	Help Page	Comments
Remote			
	If you only have FTP access	InstallWithOnlyFtpAccess	Video example
	Sourceforge hosted	SourceForgeTikiInstall	
Linux			
	Linux + Apache	InstallTikiDoc	
	RPM Package Manager (RPM)	InstallTikiRPM	
	Gentoo Linux ebuild instructions	InstallTikiGentoo	
	Debian package	InstallTikiDebian	.. todo ..
	Mitel SME Server	MitelSMEInstall	http://www.e-smith.org
	Apache Virtual Hosting	InstallVirtualHosting	
Intranet			
	Linux (Fedora) + Apache	InstallTikiIntranet	
Mac			
	Mac OS X (Server)	InstallTikiOSX	
Windows			
	Windows + IIS	IisInstall	
	Desktop Windows box	InstallEasyPhpAndTiki	XP, 2000, ME, 98
x86 Checkout Version			
	Knoppix + Tikiwiki	(We need someone who can host this 650Mb ISO image)	download, burn, reboot or purchase
PHP5 Guidelines			
	Gentoo + PHP5	TikiWikiPHP5	Gentoo and possibly others with modification.
Moving			
	Move Tiki to another server	MoveTikiToAnotherServer	Worked for me. Feel free to add!

We are working on other formats like Debian, SuSE, etc. Feel free to help with these.

Database

Tiki currently runs with MySQL 4.0.* or earlier and PostgreSQL. Most of the documentation assumes you're using MySQL. Postgres users however have a [page](#) for some information.

Tikiwiki 1.9 -sirius- is moving towards support for 4.1.X with a upgrade in the ADODB layer, however 1.8.x does not support MySQL 4.1.x.

For more information on the Tiki installation process

- [InstallTikiHelp](#) is there for you if anything does not work right...
- [MigrateToTiki](#) exists with some useful conversion scripts
