LearningManagementSystem

according to:searchwebservices.techtarget.com

A learning management system (LMS) is a software application or Web-based technology used to plan, implement, and assess a specific learning process. Typically, a learning management system provides an instructor with a way to create and deliver content, monitor student participation, and assess student performance. A learning management system may also provide students with the ability to use interactive features such as threaded discussions, video conferencing, and discussion forums. The Advanced Distance Learning group, sponsored by the United States Department of Defense, has created a set of specifications called Shareable Content Object Reference Model SCORM to encourage the standardization of learning management systems.

Tiki has many features of a LMS. However, we are setting up a team to improve. Please see: LearningManagementSystemDev to help Tiki become a great e-learning tool.
