

Making a PHP summary from Tiki RSS

- Download <http://boastology.com/pages/download.php> The BMachine plugin
- insert the code from this .php file into your web page at the place where you need the summary
- modify the link to the RSS page in the beginning

```
$url="http://www.laka.lv/tiki/tiki-articles_rss.php?ver=2";
```

- modify the text outputed in the for cycle in the beginning of the script to output everything you need. I used this:

```
for($i=1;$i<=count($myar[TITLE]);$i++) {
$title=iconv("UTF-8", "ISO-8859-13", $myar[TITLE][$i+1]); //convert the codepage (I need
this)
$description=iconv("UTF-8", "ISO-8859-13", $myar[DESCRIPTION][$i]);
$link=$myar[LINK][$i];
$pubDate=$myar[PUBDATE][$i];
if($pubDate) { // Only show enteries with a publication date
$pubDate=strftime( "%d.%m.%Y" ,strtotime($pubDate)); //Convert the date to something
sensible
echo <<<EOF
<p><b>$pubDate</b> - <a href="$link">$title</a><br>
$description</p>
EOF;
}
}
```

- I also had to change this line

```
//$tags=array();
$tags=array("title", "link", "description", "pubDate");
```

- In Tiki 1.8 there is a bug: RSS streams conflict with gzip compressed pages, so disable this feature in General features pane. You may still use php or apache level gzipping.
