

NN4ThemeReport

Let me add a disclaimer by saying that I'm not trying to slag the authors of these themes in any way (the one I wrote doesn't work either), But I thought everyone might want to know about this in case they were expecting compatibility with older browsers.

These tests are **unconfirmed** so if someone else would like to double check me on another browser version or platform, I would appreciate it

Most of these themes look just fine in Opera 7.23 Linux/IE 6 Win Most all problems are exclusive to NN4.

Browsers used: Netscape 4.76 Linux | Netscape 4.8 Windows

On many of the themes, I was unable to log in with NN4 due to script errors, on others I was unable to use the admin section or any almost any other forms. Left column menus worked in **none** of the themes, and sub-pages ranged from disordered to completely unreadable. None of the themes tested allowed any form of usable functionality with NN4.

508	renders header only
akwa	chaos, tons of overlap
bluegreen	insanely wide, 70% chaos
*metal	crashes 4.76
boreal	no background, completely black
codex	insanely wide, 70% chaos
dblue	same as codex
default*	insanely wide, 70% chaos
elegant	insanely wide, 70% chaos
geo-light	almost OK, lose borders but overall layout seems to work
geo	geo-light
jalist	insanely wide, 70% chaos
jalist2	insanely wide, 70% chaos
matrix	total chaos
matrix-light	total chaos
moreneat	close, but some nasty text overlap, chaos on resize
mose	insanely wide, 70% chaos
mozilla	insanely wide, 70% chaos
neat	close, bad borders, bot_bar is at the top
notheme	chaos, tables all underneath one another
olive	insanely wide, 70% chaos
simple	total chaos
specialsauce	blank/black same as 508
subsilver	insanely wide, 70% chaos
tceti	blank white, header only
tiki	chaos, doesn't even work in opera 7.23 or IE
tranquil	more chaos

trollparty	very close, fonts are whacked but the layout seems totally fine, no overlaps EDIT: this only applies to the main page, subpages were in various levels of disarray
whitebluegrey	blank white

tikiwiki.org does not escape from the problems either. See the attached screenshot.

Note that the images are from resolution 800x600 for sake of size, but the same formatting bugs (in particular the overlapping text) show up at 1600x1200,
