

Tiki 26 Release Continues Rapid Feature Development

👤 Gary Cunningham-Lee - 30 Jul 2023 15:29 GMT-0000

Following the project's biggest-ever release, [Tiki 25](#), seven months ago, the pace of code commits has only accelerated and now [Tiki 26](#) is available with significant new features, further development of recent feature additions, and the usual bug fixes and enhancements.

New features include color mode support, so Tiki sites are responsive to the user's browser color scheme preference and can be toggled between light, dark, and auto (with more configurability options coming soon). A new emoji picker enables picking and inserting emojis (finally 🗑️). Tiki 26 includes a new theme, BookStacked, an implementation of the BookStack web app appearance. Interact.js and a URL fragment guesser have also been added.

Enhancements have been made to Cypht webmail, Calendars, the debugger console, InterTiki (for inter-Tiki-website interaction), Manticore search, Tiki's Markdown implementation, several modules, Tablesorter, Tiki Crawl for web scraping and web crawling, and the tracker feature. See <https://doc.tiki.org/Tiki26> for more details.

Tiki 26 has been updated to benefit from the higher performance and new features of PHP 8.1. See [Requirements](#) for more information about Tiki and PHP versions.

This release is available for [download](#) or installation via [git](#) or [Tiki Manager](#).

Many thanks to all who contributed to developing and testing Tiki 26.

Tiki is free Open Source software that is made possible by individual volunteer efforts and donated funds and services. If you would like to help the project continue, please visit the page [Contribute to Tiki](#). Any donation would be greatly appreciated.

If there are any questions about this new release, please ask in the [Tiki community chat room](#) or use [other contact options](#). To look into paid assistance, please visit the [consultants](#) page. For enterprise-level support, please contact [EvoluData](#).

More New Security Updates Released and again Strongly Recommended

 Gary Cunningham-Lee - 12 Jul 2023 02:51 GMT-0000

In line with our [Tiki release support practices](#) and thanks to the diligent efforts of the Tiki code contributors, security updates are now available for four Tiki versions: Tiki 25 (as of this writing the current stable release version), Tiki 24 LTS (Long-Term Support) and Tiki 21 LTS, as well as Tiki 18 LTS, which has now reached the end of its support period. Many thanks also to security researcher Egidio Romano (<https://karmainsecurity.com>) and to Roberto and Rodriguez for preparing these releases.

Users of these versions are strongly recommended to update their websites. Please get the latest-version files here: [Tiki 25.2](#), [Tiki 24.4](#), [Tiki 21.9](#), and [Tiki 18.11](#).

If there are any questions, please post in the [forums](#) here or in the [Tiki chat](#) or on a Tiki mailing list. Support beyond what the Tiki community can provide through these channels is also available from EvoluData (<https://evoludata.com/Tiki-Extended-Security-Maintenance>), including support for any version, including outdated versions.

New Security Updates Released and Strongly Recommended

 Gary Cunningham-Lee - 01 Mar 2023 14:50 GMT-0000

Security updates are now available for several Tiki versions — [Tiki 25x](#), [Tiki 24x LTS](#), [Tiki 21x LTS](#), and [Tiki 18x LTS](#) — and users of any of these versions are strongly recommended to update their websites. Please get the latest-version files at the respective links.

Note that other Tiki versions, such as Tiki 15 or Tiki 20, did not receive these security fixes, so any site using such versions should be upgraded to the appropriate updated version.

The updates follow a security audit by Egidio Romano (<https://karmainsecurity.com>), and we would like to thank him very much for this work.

Biggest Tiki Release Ever: Tiki 25

 Gary Cunningham-Lee - 23 Dec 2022 08:59 GMT-0000

Tiki 25, our biggest release ever in terms of new features and technical upgrades, was completed after

nine months of intense development, a fitting conclusion to [Tiki's 20th year of continuous development](#).

Some Tiki releases were characterized by big new features, some by big revamps of existing features, and some by big interface upgrades. Tiki 25 is notable for advancing in all three of these ways.

This release is available for [download](#) or installation via [git](#) or [Tiki Manager](#). The PHP requirement remains at version 7.4. See <https://doc.tiki.org/Tiki25> for full details.

Many thanks to all who contributed to bringing Tiki 25 to completion at a challenging time, demonstrating the [antifragility](#) of our "wiki way" of software development.

Read on for more specifics about version 25 of Tiki.

[Tiki 21.7 Released and Recommended](#)

 Gary Cunningham-Lee - 11 Oct 2022 07:39 GMT-0000

Websites running Tiki 21 should be upgraded to Tiki 21.7 to take advantage of bug and security fixes. Tiki 21.7 is available here: https://sourceforge.net/projects/tikiwiki/files/Tiki_21.x_UY_Scuti/21.7/.

[Subversion updates for all Tiki versions ending January 2023](#)

 Gary Cunningham-Lee - 24 Sep 2022 09:55 GMT-0000

Subversion (SVN) updates for all versions of Tiki will end in January, 2023. The [Git and SVN combined workflow](#) will be terminated, and Git will be the sole revision control system used by Tiki. The project's code developers are already using Git exclusively, but anyone using SVN for deployment will need to switch to Git for Tiki code updates, such as by using [Tiki Manager](#).

[End of service life approaching for Tiki 18 - what options do you have?](#)

 Gary Cunningham-Lee - 24 Sep 2022 06:10 GMT-0000

Tiki 18 LTS was first released in January of 2018 and so in January, 2023 it will reach the end of its service life. This means it will no longer be maintained by the Tiki Community, and no longer receive security fixes or feature updates. Tiki 18 users are urged to upgrade their site to the latest Tiki Long-Term Support (LTS) version. Organizations that for some reason choose to continue using Tiki 18 can seek professional enterprise support from a Tiki [consultant](#).
