

PdfGenerationDev

Status/RoadMap

Tiki has a PDF export from wiki feature, but it has many bugs.

Marc Laport, Jason Diceman, Val Luck and, Xavier de Pedro, (add your name here) are offering a total of \$300 USD to any single or team of developers that can get this feature fully functional.

Post on this page or contact jason-tiki (at) cooptools.ca to help out.

We are currently collecting a list bugs and defining what we mean by "fully functional".

Wishlist:

- export a complete wiki-structure to PDF, including a table of contents
- export all pages from a category, including a table of contents

It's not really Tiki-ish, but XSL-FO (using Apache FOP) could be used to generate the PDF documents. Downside is that it causes a major dependency to a large, not widely available, application. --lphuberdeau

Bugs

- (Solved)Pictures are only inserted by about a third. The upper part is inserted, the lower part is just gray. Looks like a slowly loaded web page that you pressed "stop" in the browser half way. (Tikiwiki 1.8)
- (Solved)[pdf generation does not understand box plugin](#)
- (Solved)[PDF generation problem when page starts with space](#)
- (Solved)[PDF created from Safari \(Mac OS X\) has to be renamed](#)
- (Solved)[a numbered list item, followed by an italic text error](#)
- (Solved)[PDF conversion error with dt, dd, dl tags](#)

More to be add under #876666 on SF search "PDF"

Support Requests

TikiTeam

[sylvie](#) : 3/19/05 - rewriting the pdf generation by using another LGPL library : work in progress

nchankov : 02/14/06 - all issues are solved with new library [html2pdf](#) changes are currently available on CVS version

[xavi](#): 02/17/06 - nchanov, and others: I've read at a [html2pdf page](#) that their code is licensed with GPL, and not LGPL. Doesn't it arise any incompatible license issues if pdf2html is released within tiki 1.10 instead of as TikiMod (if possible)?

[sylvie](#): 02/17/06: Yes this will have to move to mod because of the GPL license and because it needs a php with DOM XML module

Trackers

Competition and standards

[MoreGroupware](#) has two PDF export modes: (save as PDF or View) using the [FPDF library](#)
