

PluginCode

Code Wiki Plugin

Code can be used to display lines of preformatted code in wiki pages.

Using CODE tag Without parameters

{CODE()} <?php function foo(\$foo) { print(\$foo); }?> {CODE}

```
<?php function foo($foo) { print($foo); }?>
```

Line numbering : In

{CODE(In=>1)}some code line numbered {CODE}

```
some code  
line numbered
```

(1.8) Syntax coloring : colors

Only php color is available for now. more are expected.

{CODE(colors=>php)}<?php function foo(\$foo) { print(\$foo); }?>{CODE}

```
<?php function foo($foo) { print($foo); }?>
```

(1.9) caption insert : caption

{CODE(caption=>Caption)}some text{CODE}

```
some text
```

(1.7.1.1) If you see confusing output like """ or so (actually double-processed html special characters), try to check "Allow HTML" option.

Source

You can edit the plugin if you need to change the look and feel of the output. There is only one file to deal with.
{CVS()}lib/wiki-plugins/wikiplugin_code.php{CVS}
