

PluginMfolder

Wiki Plugin MFOLDER

MFOLDER shows at the moment this (still more to do!):

attention

this is the first variation from the demos given by the `getid3` php class library. So it is NOT tested against vulnerability to html injects or browsing *hidden* areas. A lot must be done ...

Description

This plugin lists Mediafiles (audio & video) in specified folder and shows the id3 tag content

getID3() is a PHP4 script that extracts useful information (such as ID3 tags, bitrate, playtime, etc.) from MP3s & other multimedia file formats (Ogg, WMA, WMV, ASF, WAV, AVI, AAC, VQF, FLAC, MusePack, Real, QuickTime, Monkey's Audio, MIDI and more).

... which sounds good

Usage

1. Copy attachment to:

```
lib/wiki-plugins/
```

2. get `getid3` php class from <http://sourceforge.net/projects/getid3/>
3. and copy `getid3` folder to

```
lib/
```

USAGE

```
{MFOLDER()}PATH to FOLDER{MFOLDER}
```

PATH starts from document root (debian eg. `/var/www/`) and must be accessible by httpd

Example

```
{MFOLDER()} /pub/sound/{MFOLDER}
```

Download

 [wikiplugin_mfolder.php](#)

TODO

- a better display of filesize in byte, Kb, Mb ...
- automatic generating of playlists like in [zina](#)
- translations ""
- security stuff !!!
- things I forget now ...

WISHES

- a sortable table where i can select author, titel, filesize bla in any order,
- width, max shown lines etc ... (is sorted by title now)
- a preset by default to keep it simple as it is ... showing folder /x/y/
- I want to add a MRSS feed as discribed here: <http://search.yahoo.com/mrss>
- extending this then to a iTunes compatible RSS feed
http://phobos.apple.com/static/podcast_specifications.pdf

seems that everything is allready there  <http://search.yahoo.com/mrss>

```
<media:content
    url="http://www.foo.com/movie.mov"
    fileSize="12216320"
    type="video/quicktime"
    isDefault="true"
    expression="full"
    bitrate="128"
    framerate="25"
    duration="185"
    height="200"
    width="300" />
```

links

- <http://sourceforge.net/projects/getid3/>
- <http://getid3.sourceforge.net> php4 class to read id3v1 id3v2 tags, ogg comments etc in soundfiles
