

Current state : We have a bit too basic polls.

Wishlist

- permission system should have more than "tiki_p_vote_poll", it should be possible to delegate adding, removing and admin polls to certain groups.
 - I think only a tiki_p_poll_admin is necessary for this *Chealer9*
- ability to vote on tracker entries would be nice (vote for the top 3 defects kind of thing)
- User can change his vote
- Message notifying a vote was rejected, either because user has no right, either because he already voted (messages should be different) *Chealer9*
- There's no link for users to view polls list (it's under admin 😊) *Chealer9*
- nicer reports and layout, see example at [macromedia](#)

Trackers

Bugs

- [Polls : deactivation and current dont work](#) (2 bugs in the same report for now...make it important 😞)
- [Polls : Massive closing not working](#) (priority 2)

RFEs

- Allow polls submissions *Chealer9*
- Per poll option to show voters' name (whether displayed by default or not) [\[+\]](#)
- ability to specify width
- css could be improved, title could be larger & bold
- need option whether to repeat question within block (good for docking on side panel, but not if in center panel)
- allow checkboxes rather than single vote

(i apologize if these features already exist)

- Different popularity bar (presently very sufficient, but it seems "0 is something" and doesn't use colors to ease reading) *Chealer9*
- As a more complex (and future) wish, forms of voting more appropriate for democratic decisions (by example ordering of choices). *Chealer9*
 - This is wicked idea: we could rate our friends like we do in orkut (giving hearts, stars and ices), but on subjects that a poll could belong to. Then if user does not vote in a poll, we check what's the poll subject and user's vote is automatically delegated to his friends, shared according to ammount of karma each friend has in such subject.
