Introduction to upgraders from earlier versions

If you are migrating to [Tiki6](#) from Tiki versions earlier than [Tiki5](#), you are encouraged to read first the pages describing the changes introduced in earlier versions of Tiki, such as:

- [Tiki5](#)
- [Tiki4](#)
- [Tiki3](#)
- [Tiki2](#)

as well as the page linking to the resources related with [Upgrades](#)

If this is your first installation ever of Tiki, welcome to Tiki Community! You'll find details about the installation here:

- [Installation](#)

Remember that you can try Tiki6 using any of the [demo](#) installations or by means of a [TikiLiveCD](#).

Note:

If you are planning to [Upgrade](#) from a Tiki version earlier than Tiki5.1, or you have never fixed the potential encoding issue in your database, please follow these 3 steps once:

http://doc.tiki.org/Upgrade#Fix_the_encoding_issue

What's New

See it in [Tiki6](#)

Important Changes

See it in [Tiki6](#)

Requirements

See them in [Requirements](#)

Installation

See [Installation](#)

Upgrade

See [Upgrade](#)

Known Issues

Multilingual Structures

When viewing a wiki page within a structure that has translations, the page's language drop-list to switch to a different translated language has been disabled.

 Note: This does not affect pages that are *not* in structures.

Workaround:

- Use the Switch Language module instead.

Storing Wiki Images in ../img/wiki_up

If **not** using the File Gallery to store uploaded wiki images, Tiki instead will store all uploaded images in the ../img/wiki_up directory. When uploading new images, Tiki may not automatically include the **{img ...}** tag

(even though the image was successfully uploaded.

Workarounds:

- Manually add the **{img ...}**
- Turn off **Ajax**.
- Use a File Gallery instead, to store wiki images.

WebDAV

The Tiki WebDAV works with **http://** connections, but not **https://** (secure) connections. This will be addressed in future release.

Default Password Length

In Tiki 6, the default password minimum length is **5 characters**. When upgrading from a prior version of Tiki:

- If your Admin password is shorter than 5 characters
or
- If you do not have a minimum length specified

you might not be able to log in as the Admin after upgrading.

Workarounds:

- Change the Admin password **before upgrading** to contain more than 5 characters.
- After the upgrade, reset the Admin password from the database, as detailed <http://doc.tiki.org/lost+admin+password>
