Tiki 9.2 Release Notes

This document includes important information about **Tiki 9.2**. Please review this information when installing (or upgrading to) this release.

For Tiki support, [please use the forums](#).

Table of contents

Introduction to upgraders from earlier versions

If you are migrating to [Tiki9](#) from Tiki versions earlier than [Tiki8](#), you are encouraged to read first the pages describing the changes introduced in earlier versions of Tiki, such as:

- [Tiki7](#)
- [Tiki6](#)
- [Tiki5](#)

For complete information on Tiki upgrades, see [Upgrades](#).

If this is your first installation ever of Tiki, welcome to Tiki Community! You'll find details about the installation here:

- [Installation](#)

What's New

- Use [Server Check](#), backported from Tiki10, to confirm that your server environment meets Tiki's minimum requirements.
- Automatically generate a site map for SEO performance. See [Search Engine Optimization](#) for details.
- Use wiki syntax (including plugins) in menu labels to allow customized formatting and special effects.
- When using Lucene Search, now:
 - the page alias is displayed if the page is in a Structure and an alias is set
 - the search result snippet can be wiki parsed (pref in admin screen)
 - content items in designated Categories can be excluded from search results (pref in admin screen) - this stops the items from being indexed so a Rebuild Index is needed whenever this is used/changed
- Several fixes with respect to user registration, so make sure to check your setup after upgrade.
