

**Tiki 1.8.4 was released 2004-08-01, see our [download section](#) at SourceForge to get it 😊**

Release 1.8.4 managed by [Terence](#) aka **teedog**. Feel free to message Terence on this site or find teedog in #tikiwiki at irc.freenode.net.

Note that all the relevant bugfixes below can be found in the latest BRANCH-1-9 (1.9.x) and HEAD (1.10.x) code. If they are not, please let us know.

To checkout the 1.8.4 code from CVS use:

---

```
export CVS_RSH=ssh export CVSROOT=:ext:sfname@cvs.sf.net:/cvsroot/tikiwiki cvs co -r BRANCH-1-8 tikiwiki
```

Target Release Date:

- July 31 or August 1

License Issues Resolved:

- Diff engine replaced with LGPL code (terence)

Bugs Fixed:

- Fixed articles wiki plugin which ignored real number of comments and displayed 0 comments all the time ;) [luci](#)
- Fixed version conflicts related to wiki tag restorations (terence)
- admin-assignuser.php: if a default group has not been set, a blank entry should be displayed (terence)
- minicallib.php: fixed a typo in a db query - [gmuslera](#)
- tiki-edit\_submisson.php: fixed bugged display of the rating field when selecting article type "Review" (terence)
- [Bug #973561](#): workaround for environments where \$\_SERVER['SERVER\_NAME'] is undefined (terence)
- [SF BUG 818569: RSS with authentication ohertel](#)
- cosmetic fix: don't display reply icon in forum threads if user has no permission to post (terence)
- forum stats aren't updated after moving a thread (until someone enters the affected forum) (terence)
- bug [#894670](#): wiki edit permission should not depend on global wiki view permission if individual permissions are assigned for a wiki page (terence)
- bug [#962993](#): duplicate version numbers when editing wiki pages (terence)
- bug [#961711](#): broken find function for orphan wiki pages (terence)
- bug [#930209](#): tracker categorization broken on tiki-admin\_trackers.php (terence)
- bug [#924502](#): parse\_url() seems to be more robust than basename(); avoid login problems when tiki-index.php is the DirectoryIndex (terence)
- bug where current page gets deleted without a trace when rolling back to a previous version, resulting in the inability to undo a rollback and a gap in version numbers (terence)
- bug [#924985](#): the CATEGORY() plugin couldn't handle type=directory or type=forum (terence)
- a forum home is selected even when none is set in Admin/Forums (terence)
- bug [#898860](#): the directory category removal function leaves all kinds of zombie subcategories and member sites (terence)
- Rewrote large part of the buggy wiki edit-conflict code which should fix bug [#872234](#) and several other edit-conflict related problems. (terence)
- users logging in from the Tiki homepage are not sent to their group homepages (terence)
- users logging in from wiki pages are always sent to the wiki homepage (terence)
- inner boxes created by embedding the BOX plugin within each other had messed up line spacing (terence)
- the author of a shoutbox msg changes to the shoutbox admin who edits the msg (terence)

- the name inputted by an anonymous user in Live Support is lost (terence)
- Path disclosure fixes in the smarty\_tiki area. [Damian](#)
- Fixed case-sensitivity for wiki page names to be like in 1.7 and avoid security flaw [mose](#)
- Fixed overlib tooltip width in moreneat.css (terence)
- Scrollbar of the textarea no longer jumps to the top after using a quicktag (terence)
- Fixed bug where removing any parent categories of an object causes the object to become uncategorized even if there are other parent categories (terence)

Notes:

- Version numbers increased - [Damian](#)
