Improvements

[-]

- directory categories sorted in the same way in the different place - [sylvie](#)
- improved the quality of error message when db not created [mose](#)
- backported upgrade to 1.0.6 of Net::Socket [mose](#)
- backport: change getfilecontent by tikilib->httprequest() [mose](#)
- backporting vars sanitize improvements [mose](#)
- xmlrpc security upgrade to 1.4.0 [mose](#)
- SF#[1110956](#) BLOG: Minor UI Change Suggestion, thanks Brian Wilson. People may lose less blog post now due to better sorting of submit buttons.
- fold error404.tpl functionality into error.tpl (michael davey)
- Search engine: Backport new layout options from BRANCH-1-9 (michael davey)
- Send 404 error on page not found; be more helpful if page doesn't exist (michael davey)
- added Bulgaria flag
- TikiMaps: Option to stop downloading a layer [Franck](#)
- Bidis codes in edit help tool Toggg
- Group deletion now cleans up user to group assignments, object permissions, and group inclusions. (jburley)
- New language Piji Solomon(sb)
- SF#[1121095](#) sort improvement
- Added a default order in get_forum_topics if the order param is empty (runix2)
- remove scaled images (redflo)
- TikiMaps: Directory traversal check (franck)
- Tikimaps: fixed bug for map index creation (franck)
- TikiMaps: fixed an odd bug with IE (franck)
- User Bookmarks: Use httprequest in case allow_url_fopen is not set. (redflo)
- Updated Catalan language (xavidp)
- Now raises PEAR error if DNS resolution fails. This speeds up caching of external pages if the lookup died. (jburley)
