The calendar year view is broken in master (has been for a while). Something to check in the revamp, I imagine.

Conclusion: 1) Interact.js: and 2) Sortable.js:

Guest: Benoit Grégoire 00:36:05
@gary: Humm, it was working when i ported to fullcalendar 6 and the new build system. It's indeed broken now.

I noticed it broken several months ago also (displayed in one horizontal row).

Looking forward to snapshots []

https://dev.tiki.org/Snapshots-from-trunk

Gary Cunningham-Lee (chibaguy) 01:06:52
I was thinking maybe snapshots would also be useful for people who can't run npm on shared hosting accounts — they could stay more current with code and not have to wait for version releases.

Elvis ANSIMA (elvis.ansima) 01:29:21
OMG, 2 for performance.... []

Gary Cunningham-Lee (chibaguy) 01:33:16
Performance is 26 on tiki.org/Community (https://pagespeed.web.dev/analysis/https-tiki-org-Community/slo4sweisl?form_factor=mobile), which is
quite a bit better.

Elvis ANSIMA (elvis.ansima) 01:33:42
Also long unused scripts

Gary Cunningham-Lee (chibaguy) 01:33:42
Maybe I should replace the animation on the HomePage with a plain image.

Gary Cunningham-Lee (chibaguy) 01:35:18
Suggestions are welcome []

Elvis ANSIMA (elvis.ansima) 01:36:00
How about minimizing all css and js that we send to the browser?

Jonny Bradley (jonnybradley) 01:36:20
https://pagespeed.web.dev/analysis/https-creativeloafing-com/b33hen9gwf?form_factor=mobile

Elvis ANSIMA (elvis.ansima) 01:38:50
Most of times, the mobile score is lower, for tiki.org/Community the desktop is around 43

Elvis ANSIMA (elvis.ansima) 01:41:07
At least when minimized we can save the size of bundle we send to the user, which i think can reduce TTFB
