

# Site5

Site5 has restrictions for php files. They must have the correct permissions.

1. Change the permissions of fixperms.sh to add "execute"
- 2- Run sh fixperms.sh from the command line
- 3- Exception: fixperms gives 666 permissions to tiki-install.php Via FTP, you should change to 644

When running ./fixperms.sh, choose "fix" and for the rest, just choose click "Enter" to all the questions, to choose the defaults.

```
✖  
$ sh fixperms.sh  
Command [fix,open]: fix  
You are not root. ctrl-c to break now.  
  
Group [apache]:  
Multi []:
```
