

# Smarty

Smarty is [the most popular template engine on Ohloh.net](#) and is used by Tiki since the beginning of the project (2002). We upgraded to [Smarty 3](#) in [Tiki8](#) and 3.1 in [Tiki9](#).

Since Tiki 15, if you want to modify a template, copy it and put the copy in the custom theme directory, e.g. themes /custom\_theme\_name/templates (it was /templates/styles/custom\_theme\_name/ prior to Tiki 15). See Themes ("How To Create a Custom Theme") for more details.

Tiki is the or among the [most popular FOSS projects that uses Smarty](#).
