

TWR:\_:minor issues

This is a todo list for minor issues on the \*tiki.org websites.

fmg started this in early October '12 and it is a part of the

: **Tiki Website Revamp.**

:

## Table of contents

---

### 1. [tiki.org/tiki-newsletters.php](http://tiki.org/tiki-newsletters.php)

(2012-10-04)

There is a orange box which starts with the text "Tiki News Releases", and there are two URLs at the end. But it is not possible to click them directly.

<http://tiki.org/tiki-newsletters.php>

- Newsletter descriptions are not parsed.

### 2. [suite.tiki.org](http://suite.tiki.org)

(2012-10-04)

<https://suite.tiki.org/tiki-index.php> redirects to <http://suite.tiki.org/tiki-index.php> (unsecure protocol).

Relates: to [Areas Perspective Multi-domain dogfood](#)

### 3. [suite.tiki.org](http://suite.tiki.org)

(2012-10-04)

~~The "Newest Blog Posts" (right side column) hyperlinks are dead. Message is either "You are not logged in. Go to Log in Page" or "Blog not found".~~

Display of blog posts (temporarily) disabled

Relates: to [Areas Perspective Multi-domain dogfood](#)

#### 3.1. login for reading the blog?

I guess it is not intended to log in just for reading the blog, is it?

- <http://tiki.org/blog26-Rick-s-Tiki-Wiki-Blog> is public — no login required.

Relates: to [Areas Perspective Multi-domain dogfood](#) as

<http://tiki.org/blogpost550-Updated-Smarties-coming-soon-I-hope> is OK

### 4. [doc.tiki.org/Download](http://doc.tiki.org/Download)

(2012-10-04)

<https://doc.tiki.org/Download> redirects to <http://info.tiki.org/download> and (besides the protocol issue) it is not possible to edit this download documentation. There are some issues how sourceforge generates URLs and this may lead to a problem when using wget, but this problem is solved and should be documented (as in IRC logs).

Update fmg:

The wget related issues are included in the download description now.

## 5. profiles.tiki.org (https)

(2012-10-04)

~~No login possible, only from [http://profiles.tiki.org/tiki-login\\_scr.php](http://profiles.tiki.org/tiki-login_scr.php) and not (!) from [https://profiles.tiki.org/tiki-login\\_scr.php](https://profiles.tiki.org/tiki-login_scr.php) fixed~~

no "Stay in SSL mode" option

a similar problem (or exactly this one?) at themes.tiki.org was solved via IRC yesterday.

As of 2012-10-19

Medium

Large:

```
{img src="display366" thumb="y" rel="box[g]" height="50%" width="50%" max="400"}
```

## 6. security.tiki.org

(2012-10-05)

~~In line Subscribe to the Tiki project information on Freecode (previously known as Freshmeat) the URL is <http://freecode.com/projects/tikii> with a redundant i at the end.~~

Comment by Rick S.:

We \*really\* should upgrade security.t.o to 9.x LTS (at least) and use the FiveAlive theme. Can whoever has admin rights contact me directly?

Comment by marclaporte:

Hi! Actually, there is next to no content on security.tiki.org

The reason it was a different site was for better SEO and for someone

to have a clear landing page, for security researchers, etc. We should just shut it down and make a <http://dev.tiki.org/Areas+Perspective+Multi-domain+dogfood> like <http://suite.tiki.org/> is of tiki.org It should presumably be a subdomain of dev.tiki.org

## 7. info.tiki.org/tiki-index.php?page=Berater&no\_bl=y (https)

(2012-10-05)

Buttons below the edit box didn't work properly, especially the preview button erased all content from the edit box. At IRC ricks99 discovered double id usage as cause. Despite probably not all pages at info.t.o were affected, he disabled the buttons below the edit box as workaround. Problem not fixed yet.

## 8. irc.tiki.org (https)

(2012-10-06)

~~Forbidden + [https://irc.tiki.org/irclogger\\_logs/tikiwiki](https://irc.tiki.org/irclogger_logs/tikiwiki) Not Found but [http://irc.tiki.org/irclogger\\_logs/tikiwiki](http://irc.tiki.org/irclogger_logs/tikiwiki) is available. fixed by changi~~

## 9. dev.tiki.org

(2012-10-06)

~~The search function "Search Wishes (subject only)" (right column) seems to be restricted to tracker. It'd be helpful to have got a general search function as at the community, doc.t.o or info.t.o pages. fixed by Marc~~

## 10. info.tiki.org

(2012-10-06)

The search button (magnifying glass) seems not to work. It's necessary to press "Enter" (keyboard).

Marc Laporte wrote:

*yeah, info.tiki.org a Tiki 6.x so until we upgrade to 9.x LTS, that is how it will stay...*

#### 11. Search function and parsing of HTML-tags

(2012-10-06)

example: community

search "tikifest", the first two result pages are:

(a) [http://tiki.org/tiki-searchresults.php?find=tikifest&boolean=on&boolean\\_last=y](http://tiki.org/tiki-searchresults.php?find=tikifest&boolean=on&boolean_last=y)

(b) <http://tiki.org/tiki-searchresults.php?find=tikifest&boolean=on&offset=50>

Starting at search result "TikiFestBarcelona2,de" in (a) and "TikiFestBarcelona2" in (b) the text is displayed in italic, up to the end of the whole search result page.

This is due to the fact that TikiFestBarcelona2

<http://tiki.org/TikiFestBarcelona2> contains a box at the beginning of the page with contains an `<em>` tag which is quoted as active HTML tag within the search result, but the closing tag is not quoted.

#### 12. Community login remember timeout

(2012-10-06)

Despite activating the checkbox "Remember me (for 1 week)" the login needs to be repeated after a few hours (less than four) of inactivity.

No cookies or other browser stuff were deleted during that time. Login was via https with additional option "Stay in SSL mode:". This effect doesn't occur with dev.t.o or doc.t.o login. Browser: Google Chrome.

Update fmg:

I checked again, [https://tiki.org/tiki-login\\_scr.php](https://tiki.org/tiki-login_scr.php) this time with Firefox and https/stay SSL/remember me, the time to remember login during inactivity seems to be larger than 30min and smaller than 4h30min.

(2012-10-07)

Next test: 11h of inactivity, but **no** logout with Google Chrome.

Whatever is decided should be default, please add to [Preferences of \\*.tiki.org](#)

#### 13. Community avatar upload

(2012-10-06)

At the page "User Preferences" the option "Pick user Avatar" allows to choose and upload an avatar, but once this is done nothing happens. It remains with status "no avatar". Confirmed with a small gif and a small png, both smaller than 45px × 45px.

#### 14. Community (userpage) - external links

(2012-10-06)

By including an external link a little symbol<sup>1</sup> is put behind. As seen at other projects, it could be helpful to use a different symbol for https links (external). I suggest a little padlock. I suppose this cannot be done without coding (just by CSS), can it?

<sup>1</sup> (img/icons/external\_link.gif)

Related: [External Wikis](#)

#### 15. Extra blank line in footer of community site

Some sites such as <http://tiki.org/tiki-index.php> has same [Footer Code](#) and yet, not the same result as

other \*.tiki.org sites. Why?

#### 16. Colors doc.tiki.org

(2012-10-07)

White text / yellow background is difficult to read, e.g. as in

[https://doc.tiki.org/Wiki-Syntax+Text&structure=Tiki+User+Guide#Quick\\_Reference\\_-\\_Basic\\_Text\\_Formatting](https://doc.tiki.org/Wiki-Syntax+Text&structure=Tiki+User+Guide#Quick_Reference_-_Basic_Text_Formatting)

#### 17. Issues with TAG

(2012-10-07)

As one can observe at the LinuxTag table row in [TikiFest#Germany](#), the link to 19<sup>th</sup>LinuxTag does not have *LinuxTag* to be clickable when you are logged on, but it is clickable when you are logged off.

#### 18. quality.tiki.org and qa.tiki.org

(2012-10-07)

The secure versions <https://quality.tiki.org/> and <https://qa.tiki.org/> are htaccess password protected. The login credentials in the description lead to 403 Forbidden.

#### 19. live.tiki.org

(2012-10-07)

The secure version isn't available and doesn't redirect to <https://tiki.org/live> as expected. This is not one of the main servers, and thus, the SSL certificate has not been installed there.

#### 20. demo.tiki.org

(2012-10-07)

The secure version is a redirect to http only. This is not one of the main servers, and thus, the SSL certificate has not been installed there.

#### 21. i18n.tiki.org

(2012-10-07)

The secure version is a redirect to http only. This is not one of the main servers, and thus, the SSL certificate has not been installed there.

#### 22. Look & Feel

(2012-10-07)

Fixed width (Look & Feel -> Theme) should be disabled. It's more convenient to have a huge width in the mid part if one uses an appropriate browser window size. Hopefully the edit box width will increase, too.

#### 23. Calendar function

It'd be a nice feature to have a calendar with events as TikiFest, TikiLive, FOSS meetings and stuff like that. Should be either left or right column.

We could get RSS from <http://info.tiki.org/tiki-calendar.php> ?

#### 24. Left column vanishes

<http://tiki.org/TikiFestBarcelona3> Right column vanishes too, but it can be toggled visible again. Browserindependent.

#### 25. Different Logos

Upper left Tiki logos in different colors differ slightly in position inside the image, e.g. community and info.t.o, while community, dev and doc seem to be identical in position

#### 26. FAQ not available

I have added a fix for the FAQ feature.

"r44002 [FIX](#) Fix the all get\_faq references. They were not updated when the faq functions were moved out of TikiLib." Backported to 10 and 9, too. Arild.

Forum links to several FAQ pages, but they do not exist:

[http://doc.tiki.org/tiki-view\\_faq.php](http://doc.tiki.org/tiki-view_faq.php)

[https://doc.tiki.org/tiki-view\\_faq.php](https://doc.tiki.org/tiki-view_faq.php) secure

[http://doc.tiki.org/tiki-view\\_faq.php?faqId=2](http://doc.tiki.org/tiki-view_faq.php?faqId=2)

- The FAQ feature was deprecated some time ago. The FAQ links should redirect to the [Tiki FAQs](#) wiki page.

The redirect seems to work correctly (for me):

[http://doc.tiki.org/tiki-view\\_faq.php](http://doc.tiki.org/tiki-view_faq.php) ->

<http://doc.tiki.org/tiki-index.php?page=Tiki%20FAQs&redirectpage=>

- This is odd: the redirect does not work here with FF8
- It does work with Epiphany.
- Works in Linux FF 16.0.2
