

TerenceInstallationInstructions

```
<h2><font color='red'>TikiWiki is not properly set up:</font></h1> <pre> The directory
'/home/tyc5/public_html/clean/tiki/backups' is not writeable by apache. The directory
'/home/tyc5/public_html/clean/tiki/dump' is not writeable by apache. The directory
'/home/tyc5/public_html/clean/tiki/img/wiki' is not writeable by apache. The directory
'/home/tyc5/public_html/clean/tiki/img/wiki_up' is not writeable by apache. The directory
'/home/tyc5/public_html/clean/tiki/modules/cache' is not writeable by apache. The directory
'/home/tyc5/public_html/clean/tiki/temp' is not writeable by apache. You may either chmod the directories
above manually to 777, or run one of the sets of commands below. <b><a href='tiki-install.php'>Proceed to
the Tiki installer</a></b> after you run the commands below. If you cannot become root, and are NOT part of
the group apache: $ bash $ cd /home/tyc5/public_html/clean/tiki $ chmod +x setup.sh $ ./setup.sh yourlogin
yourgroup 02777 Tip: You can find your group using the command 'id'. If you cannot become root, but are a
member of the group apache: $ bash $ cd /home/tyc5/public_html/clean/tiki $ chmod +x setup.sh $ ./setup.sh
mylogin apache</i> If you can become root: $ bash $ cd /home/tyc5/public_html/clean/tiki $ chmod +x setup.sh
$ su -c './setup.sh apache' If you have problems accessing a directory, check the open_basedir entry in
/etc/php.ini or httpd.conf. Once you have executed these commands, this message will disappear! Note: If you
cannot become root, you will not be able to delete certain files created by apache, and will need to ask your
system administrator to delete them for you if needed. <a href='http://tikiwiki.org/InstallTiki'
target='_blank'>Consult the tikiwiki.org installation guide</a> if you need more help. <b><a href='tiki-
install.php'>Proceed to the Tiki installer</a></b> if you've completed the steps above.
