

Tiki Book

Basic Printing of content is currently available in Tiki through:

[Multiprint](#)

[Print Structures](#)

[Print Indexed](#)

Missing (as far as I know)

- Automatic adding of special pages such as copyright, page index, subject index, book & chapter title pages
- Collection of pages (adding to a structure) by drag and drop
- Suggestion of related pages (maybe similar pages?)
- Integration of pages from other Tiki sites. Maybe some kind of citation footnote have to be generated.
- saving of a book/page collection (structures) in MyTiki -> My books
- Shopping Card
- connection to author accounting system (by Poiesipedia/Jörn Ott)
- High Quality output through (L)A(TeX). (essential)
- Connection to a book on demand store (by region)
