

## TikiForgeDoc

TikiForge is Project Management within Tikiwiki

### Status/RoadMap

---

Its currently being completed and is in use on <http://mods.tiki.org>. Tikiwiki is ideally suited to this because it contains everything that makes up good project management already. Its just missing some feature to bring it all together.

TikiForge is scheduled to appear in 1.10, along with wiki-farms

### TikiTeam

---

[Damian](#)

### Trackers

---

- Bugs
- RFEs
- tech support
- patches

### Competition and standards

---

- dotProject
- [SourceForge](#)
- [CollabNet](#) SourceCast- see [Tigris.org](#) and [Java.net](#) for installation examples. SourceCast is a commercial closed source project (although some customers have shared source license agreements with them).
- [Gnu Savannah](#) - a fork of early SourceForge GPL
