Status/RoadMap

Tikiwiki comes as is, bundled with some external applications and many media files - especially Smarty and Adodb too.

GentooLinux has a separate ebuild for Smarty and Adodb, so you could as a sysadmin choose to rely on your system-wide external libraries. You are free to do so:

- HowtoUseExternalAdodb
- HowtoUseExternalSmarty

Take a look at TikiMods from version 1.9 on, on how to get more Mods, Styles and other nice tweaks.

Also visit StylesList and ColorSchemeGenerator for some inspiration.

Enjoy.

See

HowtoUseExternalSmarty
InstallMultipleTikis - InstallVirtualHosting, for hosting multiple virtual domains in one Tiki filebase with separate db-s

All comments and suggestions, and any kind of cooperation are very welcome!

Hey, Gentoo fellows! Add your name here, or link your UserPage!

- UserPageang

CVS Doc section

This is where new features being developed and only in CVS are documented. When the CVS becomes RC/official release, the info in the CVS docs is transferred to update the official docs (FeatureXDoc).

For a start the ebuild is going to use CVS checkout of Tiki for installing a bare 1.8 Tiki version, and patching it for the use of external Gentoo-Smarty.

Discussion/participation

Where ideas can be exchanged, debated, etc. Interested people can subscribe to the wiki page and/or to these forums as they would a mailing list.
