TikiWikiJabberServer

For some time now, Ive been hosting a Jabber server and the domain jabber.tiki.org on it.

Im now putting final touches to a script to give every **Developer** within the Tikiwiki community a jabber account in the form of username@jabber.tiki.org

I still have to work out a suitable password system, maybe we can use a custom field on tikiwiki.org's user preferences to enable jabber account and a jabber password? Im unable to use the same password as its stored in a md5 hash 🙂
