

UserPageMaddi

Welcome

Hiho everybody, how are you ? This is my little Wiki place. I'm currently using Tikiwiki to organize a project of our Programmer Crew.

You can visit us @ www.chaoticarts.de. The Tiki is not public of course.

I think Tiki is already really great, but as always, work has to be done in many areas. I'm trying to do my part when there is time for it.

Howto's

[How to Create Flip Menus that remember their state](#)

[How To Use Smarty Modifiers In Templates](#) (out, but to easy)

[RSS Streams From *htAccessed* Pages](#) (not complete.)

Things I have implemented into Tiki

Backlink Module : **finished**, [Download](#) (Shows all Backlinks in a block)

BSAG Module : **finished**, (cool) [Download](#) (Look into the Source to see what it does (commented))

Escape Plugin : **finished**, [Download](#) (Converts some Charakter to their HTML style)

LoadPage Plugin : **finished**, [Download](#) (Loads a WebPage into the Wiki Page, definetly only for your own home Wiki)

Things I have to implement into Tiki

Better Script Support : **in progress**, {ESCAPE()} {cookie} {ESCAPE} has to work

Last Modified in Cat : **in progress**, Only show last modified in current Categorie or below until there are at least max_rows entrys

Extern Modul access : **in progress**, Ill do this as next

Automatic HTML recovery : **in progress**, Close all tags that are left from the generating plugin !

...page... *Wiki page pagination has not been enabled.*

Fun
