

# UserPageMartinGeisler

Hi, I'm a guy from Denmark, [mail me](#) if you like.

You could visit my homepage at <http://mgeisler.net/> if you want. I used to keep my own PhpWiki there, and was thinking about moving things over to Tikiwiki since it can import pagedumps from PhpWiki and generally seems like a much more interesting system. Now I'm using WordPress instead because the Tikiwiki system seems to have grown too much for my taste.

The best thing would be if one could have the very nice syntax for WikiMarkup from PhpWiki and all the features from Tikiwiki, but I don't know how hard it's going to be to port the syntax from PhpWiki.
