

# UserPagearis002

Maybe it is a good idea to have an own Tiki page?

1. One more Tiki bug - wishlist item where i would like to add a comment but i can't (Chromium works, but Firefox -not).

<http://dev.tiki.org/item7729-Login-and-authentication-using-Facebook-Google-or-Email>

2. Tiki Hybridauth 50+ socnets login is working with my branch

<https://gitlab.com/arilect/tiki/-/commits/socnets>

3. Forum reply bug confirmed at developers list.

I have tried to post a new forum topic on this but I couldn't because Tiki 'clever' software said there was no topic attached. A one more Tiki joke? (it is a confirmed tiki bug, btw)

4. What is the best git procedure when creating a new feature - squash all commits into one?

Do i need to create merge request for all 13 commits or squash them into one or something else?

5. Maybe interesting for REST API devs - "I Don't Need Postman Anymore!! I Use VS Code Instead..."

<https://www.youtube.com/watch?v=AbCTIemwZ1k>

6. VS Code is the best free tool for Tiki development on Linux for me.

I can't believe I would ever say that...
