

UserPageedaltan

I am an instruction designer, instruction technologist, and educational researcher.

I have little experience with PHP, but a fair amount of experience with Perl. I created a module for [YaWPS](#) which was rather similar to the Tiki "Trackers" feature. YaWPS was easy to develop for and to host, because it used flat files, but was also somewhat limited for the same reason.

Now I'm moving into the world of Tiki and learning PHP. I used Tiki to develop the Southern New Hampshire University media server (<http://snhumedia.org>) and I am also planning on using it for some personal projects. I host my websites on [TigerTech.net](#). More information is available about me at [my CV page](#).
