UserPagefabolo

Hello Tikies, I'm trying to find out what's wrong with the draw feature:

is it possible to make it works on windows (xp) without install sun java?
This is the output of java console in ie6 on xp:

Error loading class: org.jgraph.JGraphpad
java.lang.NoClassDefFoundError
java.lang.ClassNotFoundException: org.jgraph.JGraphpad
at com/ms/vm/loader/URLClassLoader.loadClass
at com/ms/vm/loader/URLClassLoader.loadClass
at com/ms/applet/AppletPanel.securedClassLoad
at com/ms/applet/AppletPanel.processSentEvent
at com/ms/applet/AppletPanel.processSentEvent
at com/ms/applet/AppletPanel.run

at java/lang/Thread.run
How can I setup files on my server (mandrake9.1/apache...) to be correctly recognized and installed/used
from windows/IE clients? (can't say "install Java from SUN"🙂)
