

UserPageegg

I do consulting on implementation, optimization, and maintenance of tikiwiki for various for-profit and non-profit organizations. Some of the public sites that I have developed are [TWIST Standards](#), an international financial standards organization and the [Advanced Message Queuing Protocol](#) group.

I dabble all over, implementing, bug fixing, creating modules, refining templates and features, and setting up multitikis on a contract basis.

I live in the San Francisco area and can be reached at: tikiwiki (at) garygriffin (dot) net

TWIST theme is available

Feel free to download the [twist theme](#) from <http://themes.tiki.org>. If you have any problems or questions on it, let me know.

WMV wikiplugin is available

I created a wiki plugin for displaying Windows Media Player files. It works for IE and FF browsers on 1.9.x versions. Download the [attached file](#) and place it in lib/wiki-plugins/ folder to make it available.
