

UserPagejpb105

I'm new to tiki, I don't have any public tiki sites but I have a test tiki running on my linux box.

I am interested in getting started with Tikiwiki and I'm trying to edit the help pages as I go.

I'm mostly interested in the Wiki and groupware features of Tikiwiki, although the only work I have done so far is to update the [XhtmlCssValidate](#) page as things change (so far for the worse).
