

UserPageluci

Hi there !

I am luci aka luciash d' being and this is my personal user space on tiki.org.

What I Do for the Tiki Wiki CMS Groupware Project?

- I started to contribute to Tiki in summer 2003 and since [August 2005](#) (thank you gMane.org ) I am a member of the [TAG](#), (which means I am one of the project Admins, yes)
- I am providing help on our beloved IRC [#tikiwiki](#) channel
- I'm mostly working on Tiki's UI enhancements, bug fixes and CSS/Smarty templates/PHP code cleaning
- I've started translation of Tiki to Czech language and occasionally I'm still contributing to it and fixing it
- ~~Helping the [Quality Team](#) doing quality control and voting on backports for Tiki [LTS](#) version we don't do this anymore, sadly, due to lack of manpower~~
- Working on Tiki graphics and themes

To Do List

...

Done List

- I'm author and initiator of the [Simple style](#), which was one of the first (if not the first) table-less based layout themes in Tiki
- I'm author of the [*lite CSS](#) framework/method/solution used by all bundled Tiki themes since version 3 to version 12 (before Bootstrap)
- I've introduced the [Site Identity](#) feature to Tiki, which expanded later to the Look & Feel Admin panels
- And many more things (not so interesting to be listed here) ...

Projects based on or related to Tiki

I did several designs and/or theme integrations in Tiki, namely:

- [avan.tech](#) (design integration in Bootstrap3 and BS4)
- NTD Television Czech Bureau website for on-line news production (backend) and web publishing - [www.ntdtv.cz](#) (project has ended)
- I created and maintained for several years (not anymore) the former KDE Wiki site which was built on Tiki back then
- [www.wuyi-kungfu.com](#)
- [www.vysmech.com](#)
- [www.dogfightboss.com](#) (moved to wix.com)
- [www.veggiestime.cz](#)
- + several other commercial websites built on Tiki in Czech ...

Some Tips

Grep Tips

For XHTML validity there was once a need to convert all "&" occurrences in the resulting code (URLs, etc.) to

"&";". I've searched for them using this crazy command (heavy regexp):

```
clear & grep -InER --color '\("[^ &%]+(&)[^
&\"(#)(amp;)(gt;)(lt;)(hellip;)(nbsp;)(o|a|Auml;)(\$_REQUEST)][^ \"]*\\"' *
```

Release Manager Tips

- Remember that tikirelease.sh needs to be provided with correct tag name for release number (e.g. 1.9.RC1)
