UserPagepublicfatality

I'm still in the process of setting up the webpages so I won't post any links yet. BUT I do have the databases up and running for 4 websites. DNS is in place. PHP, MySQL, and Apache are all running great. I had sendmail running but it doesn't like virtual hosts so I'm in the process of moving to qmail or postfix. Tikiwiki is great... I'm running 1.8.1 with every intention to update to 1.8.3. (few bugs I'm hoping are fixed~~image scaling?) anyways~~I'll post some links later...
