

WikiWikiClones

While Tiki is the most full featured, there is no shortage of other wiki clones.

The canonical list is available at [WikiEngines at C2](#)

Ones to watch:

- TWiki — The most impressive "pure" wiki out there. Perl, but amazingly powerful [Link](#)
- WakkaWiki — Getting more and more popular. No page delete as of Oct. 3, 2003. Strong competition to PhpWiki. [Link](#)
- WikkiTikkiTavi — Popular PHP wiki, active development. [Link](#)

Here is a short list of others:

- coWiki — Cool ideas, requires PHP 5 [Link](#)
- ASPWiki — A simple ASP script for a simple wiki [Link](#)
- Bloki — A site hosting wikis, attempts to integrate blogs, forums [Link](#)
- Blue Oxen Associates: PurpleWiki — A modified version of UseMod with "Purple numbers", Perl [Link](#)
- cwick — A heavily modified UseMod wiki, Perl [Link](#)
- Dolphin Wiki — Easy to use, Perl, cannot rollback (as of Oct 3.2003) [Link](#)
- Eddies Wiki — Completely self-contained wiki in c++; includes its own web server! Windows only. [Link](#)
- ErfurtWiki — A single script PHP wiki, can be embedded in other CMS systems. Handles Plugins, Images. [Link](#)
- Fitnessse — A stand-alone wiki and test harness. Lots of emphasis on refactoring. Java. [Link](#)
- Noodle — ASP Wiki in VBScript for IIS. Can store in Access or filesystem. [Link](#)
- JassWiki — ASP Wiki based on Dolphin. [Link](#)
- JSPWiki — Supports categories. Java (duh) and Servlets. Relatively popular among the java crowd. [Link](#)
- KeheiWiki — Powerful by obtuse [Link](#)
- langreiter.com Vanilla — Interesting mix of Blog and Wiki, emphasizing "snips" as content units. Rebol (don't ask). [Link](#)
- MediaWiki — the Phase III wiki of WikiPedia. Way back when, they used a heavily modified PhpWiki, but now use their own code. [Link](#)
- MoinMoin — Popular Python wiki, based on PikiPiki. [Link](#)
- Apache::MiniWiki — Perl module for embedding or hosting a wiki [Link](#)
- OpenWiki — Relatively powerful ASP based wiki [Link](#)
- OddMuse — Perl based wiki used by EmacsWiki. [Link](#)
- Pepys — A single user Wiki in Windows for free, pay for collaboration [Link](#)
- PhpWiki — a very popular wiki in PHP. Development has slowed down, but still a very well put together implementation. [Link](#)
- PmWiki — PHP wiki, some clever touches, active development by author [Link](#)
- Prowiki — A commercial wiki (can you believe it?) [Link](#)
- PWP Wiki Processor — PHP powered Wiki using flat files as data storage, built to run on cheap web packages [Link](#)
- QwikiWiki — Simple PHP Wiki [Link](#)
- SnipSnap — Based on Vanilla, a Snip based Blog/Wiki in Java. Some clever ideas here [Link](#)
- Friki — Small Java wiki, needs a servlet container [Link](#)
- Perki — Supports categories, user permissions, document versioning. Perl. [Link](#)
- Spinner Wiki — Spinoff of Dolphin, Perl [Link](#)
- Swiki --Wiki implementation running under Squeak and Comanche [Link](#)

- also check out Project Swiki, a beta version that allows for text and high-end dynamic media. [Link](#)
- KwikiKwiki — Perl and easy, but no diffing! [Link](#)
- UseMod — One of the original Perl wikis, and still one of the most popular [Link](#)
- VeryQuickWiki — Java and servlets. [Link](#)
- Wiki! --Compact flat-file PHP wiki system, supporting full templating, user logins and revision history [Link](#)
